New Jersey Department of Environmental Protection  
Standards for Drinking Water, Ground Water, Surface Water, Soil, and Indoor Air

### 2,4-Dichlorophenol | CAS#: 120-83-2

#### Drinking Water Quality Standards  
(µg/L or ppb)

- **Standard:**  
- **Type:**

#### Ground Water Quality Standards  
(µg/L or ppb)

- **Standard:** 20  
- **Type:** Specific  
- **GW-Quality Criterion:** 20  
- **PQL:** 10

#### Surface Water Quality Standards  
(µg/L or ppb)

- **Freshwater**
  - **Human Health:** 77(h)  
  - **Aquatic (acute):**  
  - **Aquatic (chronic):**  
  - **Aquatic General:**

- **Saline Water**
  - **Human Health:** 290(h)  
  - **Aquatic (acute):**  
  - **Aquatic (chronic):**  
  - **Aquatic General:**

#### Soil Remediation Standards  
(mg/kg)

- **Ingestion-Dermal Exposure Pathway**
  - Residential: 190  
  - Nonresidential: 2,700

- **Inhalation Exposure Pathway**
  - Residential: NA (1)  
  - Nonresidential: NA (1)

- **Migration to Ground Water Exposure Pathway**
  - Soil Remediation Standard: 0.19  
  - Soil Leachate Remediation Standard: 400 µg/L

#### Indoor Air Remediation Standards**  
(µg /m³)

- **Vapor Intrusion Exposure Pathway**
  - Residential:  
  - Nonresidential:
Ground Water Standard Footnotes:
a = Asbestos criterion is measured in terms of fibers/liter longer than 10 micrometers (f/L > 10 µm)

Surface Water Standard Footnotes:
(a) Criteria as listed at NJA 7:9B-1.14(f)(3) above as formula
(b) Criteria as listed at NJA 7:9B-1.14(f)(4) above as formula
(d) Criterion is expressed as a function of the Water Effect Ratio (WER). For criterion in the table, WER equates to the default value of 1.0.
(fc) Criteria expressed as free cyanide (as CN)/L
(h) Human health noncarcinogen
(hc) Human health carcinogen
(ol) Organoleptic effect-based criterion with no frequency of exceedance at or above the MA7CD10 flow
(s) Dissolved criterion
(T) Total recoverable criterion
FW1 means those fresh waters, as designated in N.J.A.C. 7:9B-1.15(j), that are to be maintained in their natural state of quality (set aside for posterity) and not subjected to any manmade wastewater discharges or increases in runoff from anthropogenic activities. These waters are set aside for posterity because of their clarity, color, scenic setting, other characteristic of aesthetic value, unique ecological significance, exceptional recreational significance, exceptional water supply significance or exceptional fisheries resource(s).
FW2 means the general surface water classification applied to those fresh waters that are not designated as FW1 or Pinelands Waters.
FW2-TP means FW2 trout production.
FW2-TM means FW2 trout maintenance.
FW2-NT means FW2 non-trout.
PL means Pinelands Waters
SE1 means saline estuarine waters whose designated uses are listed in N.J.A.C. 7:9B-1.12(d).
SE2 means saline estuarine waters whose designated uses are listed in N.J.A.C. 7:9B-1.12(e).
SE3 means saline estuarine waters whose designated uses are listed in N.J.A.C. 7:9B-1.12(f).
SC means the general surface water classification applied to saline coastal waters

Soil Remediation Standards Footnotes:
(1) Not applicable because toxicological information that meets the Site Remediation and Waste Management Program's policy is not available
(2) Not applicable because the calculated health-based criterion exceeds one million mg/kg
(3) Not applicable because the calculated health-based criterion exceeds the soil saturation limit
(4) Not applicable because the calculated health-based soil criterion exceeds the soil saturation limit
(5) Not applicable because ground water remediation standard is a secondary standard
(6) Not applicable because a ground water remediation standard does not exist
(7) Standard is based on natural background
(8) Standard set at reporting limit
(9) Exceeds soil saturation limit; however, health-based criterion based on particulate portion of the equation
(10) Standard based on the Integrated Exposure Uptake Biokinetic (IEUBK) model for lead in children
(11) Standard based on the Adult Lead Model (ALM)
(12) This standard is used for comparison to site soil data that have been converted to sample-specific TCDD-TEQ values through application of the Toxicity Equivalence Factor Methodology (USEPA 2010) and using the WHO 2005 Mammalian Toxic Equivalency Factors (TEFs)
(13) This standard is used for comparison to site soil leachate data that have been converted to sample-specific TCDD-TEQ values through application of the Toxicity Equivalence Factor Methodology (USEPA 2010) and using the WHO 2005 Mammalian Toxic Equivalency Factors (TEFs)
NA: Standard Not Applicable
NR: Chemical Not Regulated

Indoor Air Remediation Standards Footnotes:
(i) Not applicable because toxicological information that meets the Site Remediation and Waste Management’s policy is not available
(ii) Standard set at reporting limit
(iii) Value is for elemental mercury
NA: Standard Not Applicable
NR: Chemical Not Regulated

**Indoor air remediation standards are to be used when evaluating the vapor intrusion exposure pathway
**Drinking water**

1. The Reference Doses for the Group C chemicals incorporate an additional uncertainty factor of 10 for possible carcinogenicity.
2. Toxicity factors were developed by the NJDWQI under the A-280 process for the following chemicals, but MCLs were not adopted for unrelated reasons, such as lack of a standardized analytical method for drinking water: Ethylene glycol, formaldehyde, hexane, methyl ethyl ketone, and 2,4,6-trichlorophenol.
3. The New Jersey MCL for 1,4-Dichlorobenzene was adopted from USEPA, but New Jersey did not necessarily agree with the USEPA RfD, so it is not included on this table.

**Footnotes**

Ground Water - Footnotes

1. Carcinogen Classification - All classifications are based on IRIS unless stated otherwise

1999 Cancer Draft Guidelines:

- KNOWN - Known carcinogen
- CANTDET - Can not determine carcinogenic classification
- LIK - Likely to be a human carcinogen
- NLIK - Not likely to be a carcinogen
- ORL - Oral exposure route
- INHL - Inhalation exposure route

1986 Cancer Guidelines:

- KNOWN - Known carcinogen
- B - Probable human carcinogen
- C - Possible human carcinogen
- D - Not classifiable as to human carcinogenicity
- E - Evidence on non-carcinogenicity for humans

2. References:

NR02: EPA National Recommended Water Quality Criteria 2002

** = The carcinogen group assigned to acrolein in IRIS is the descriptor, "data are inadequate for an assessment of human carcinogenic potential" which is equivalent to Group D.

Surface Water - Footnotes

- Carcinogen group assigned to acrolein in IRIS is the descriptor, "data are inadequate for an assessment of human carcinogenic potential" which is equivalent to Group D.

- See text on cadmium. For RfD for cadmium, "(w)" stands for water. "(f)" stands for food.

- * The criterion for lead remains unchanged. The criteria for nickel are based on data from 2002 Calculation Matrix updated by the current fish consumption rate of 17.5 g/day.

Soil - Footnotes

1. Carcinogen Classification - All classifications are based on IRIS unless stated otherwise

1999 Cancer Draft Guidelines:

- KNOWN - Known carcinogen
- CANTDET - Can not determine carcinogenic classification

1986 Cancer Guidelines:

- KNOWN - Known carcinogen
- B - Probable human carcinogen
- C - Possible human carcinogen
- D - Not classifiable as to human carcinogenicity
- E - Evidence on non-carcinogenicity for humans
